

New Anti-Sweep™ Hook

- Grants direct access by customers but deters high-volume shoplifting by allowing only one product to be removed easily at a time.
- Level front staging area allows facing of a product for improved visibility and sales without the need for separate Inventory Control Clips.
- Upturned tip insures positive retention of faced product, while camel-back wire profile creates circuitous product path preventing "sweeping" and mass theft.
- Flip Scan® label holder conveniently swings up and out of the way. Employs economical plain-paper labels. Saves up to 65% on labels and up to 75% on labor over expensive adhesive labels.
- Available in a variety of backplate designs and hook profiles.
- Anti-sweep™ Hooks are the perfect low-cost complement to ScanLock™ Scanning Hook locks which provide positive locked control of hooked products and EWT Expandable Wire Tray™ shelf mount anti-theft units.
