

# New ScanLock™ Cuts Theft

Lock all product or display 1 or 2 items unlocked while the balance of stock is locked.

**Easy-to-use, inexpensive key-lock system secures most common scan hooks—and even retrofits existing hooks in place!**

- Simple swing-aside access to items; no need to remove the lock to sell product.
- Prevents removal of any stock, or can display 1 or 2 items unlocked while the balance of stock is locked and held secure. Prevents mass theft and "sweeping" of items.
- Trouble-free design re-locks without a key. Open several hooks for hands-on selling to customers, replace items and re-lock in an instant without fumbling with a key.

# Reduce Shrinkage Boost Profit!

Install locks alone to retrofit your existing hooks in-store, or full lock-and-hook combinations in your choice of hook and label holder styles. Secures scan hooks up to 1/4" diameter, with approximate 1" frontwire spacing.

Minimal cost to implement into any plan-o-gram, unlike other solutions.

Lock swings out of the way

Patents and Patents Pending

Optional security plate works with most metal & plastic backplate designs, provides additional theft deterrence in high risk environments.
